

FanFare is the in-seat delivery platform for live events — a three-sided marketplace connecting fans, food vendors, and on-the-ground runners. No capital investment from venues. No margin hit to concessionaires. Just more revenue and happier fans.

THE PROBLEM

Fans miss 15–20% of live action waiting in concession lines. Most leave their seats 2–3 times per event — and many skip ordering altogether to avoid it. That's money left on the table for everyone.

THE SOLUTION

FanFare lets fans order food, drinks, and merch from their seat — delivered by vetted runners in minutes. The "DoorDash of stadiums" model — but nobody has claimed it yet. We're building it.

How It Works

THE FAN

Order From Their Seat

Browse vendors, add items, enter section/row/seat, and pay — all without leaving their spot.

THE RUNNER

Pick Up & Deliver

Gig-based runners — pre-vetted, badged — accept orders, retrieve from the concession stand, and deliver to the seat.

THE VENUE

More Sales, Zero Friction

Concession stands fulfill the same orders they always do — just more of them. No new hardware. No integration required to pilot.

Why Partner with FanFare

**Zero cost to venue or concessionaire**

FanFare funds operations through the fan-paid service fee. You keep 100% of food revenue.

**Additive, not competitive**

We don't replace your concession model — we extend it to fans who would never leave their seat.

**No tech integration required for pilot**

Runners fulfill orders at existing POS. Full integration available for scale.

**Fan experience lift**

Better in-seat experience = better reviews, longer dwell time, and higher per-cap spend.

**Working demo available today**

Full three-app stack: fan ordering, runner delivery, and ops dashboard — live and testable.

**Pilot-friendly structure**

Start with a single section, single game. No long-term commitment to test the model.

Let's run a pilot.

One venue. One game. Real data.
